Mariehamn, 9th of January 2025

Optinova Valley Forge Production Hall Now Powered by Renewable Electricity

Optinova is delighted to announce that our Valley Forge, PA, USA factory now operates entirely on **100% renewable electricity**.

This major shift marks a significant step forward in Optinova's sustainability journey and demonstrates our commitment to reducing emissions. "By transitioning to renewable electricity, we are moving closer to aligning with **Scope 2 standards** and supporting sustainable energy practices," states **Dania Escobar, Group Sustainability Manager**.

This achievement directly supports our broader environmental goals. **Optinova's CEO Rom Mendel** states, "This marks another important milestone on our journey to achieving net-zero CO2 emissions (Scope 1 & 2) by 2035 and reflects our unwavering commitment to sustainability." As of December 6, 2024, Optinova Valley Forge joined our Finland facilities in Jomala and Godby, which are both powered entirely by renewable electricity. Additionally, our Optinova Thailand facility has significantly enhanced its use of renewable energy through the installation of solar panels.

The Optinova Valley Forge facility has recently achieved **Class 8 Cleanroom** certification and is fully equipped to manufacture high-quality medical-grade tubing solutions to address the growing demand in the U.S. market.

Through ongoing investments in innovative solutions and infrastructure, Optinova continues to reinforce its role as a global leader in extrusion technology.
